

COMPANY PROFILE

Your Engineering & Data Solutions Provider

Custom software, AI, and data science — delivered end-to-end by an engineering-minded team.

Software Development / Data Science & AI / Engineering

WHO WE ARE

An engineering and data partner for the full build

KDT Network and Data Solution is a Philippine-based technology company delivering efficient, cost-effective software, analytics, and engineering design. We build web and mobile applications, ship AI and data-driven systems, and support clients from first scope through deployment and maintenance.

End-to-end

From scope to launch to support

4 pillars

Software, data, engineering, training

NPC

DPO / DPS registered & compliant

WHAT WE DO

Four pillars, one delivery team

FOCUS

Software Development

Custom web, mobile, and desktop apps built to fit the business.

FOCUS

Data Science & AI

Analytics, ML, and AI integrations that turn data into decisions.

SERVICE

Architecture & Engineering

Professional design and engineering services.

SERVICE

Bootcamp

Intensive training that upskills technical professionals.

What makes the work hold up

01

Full-stack delivery

Web, mobile, and desktop from one accountable team — no vendor hand-offs.

03

Data & AI ready

Analytics and AI built into products from the start, not bolted on.

02

Cloud-native on AWS

Systems designed to scale, deploy, and stay reliable on modern cloud.

04

Secure & compliant

NPC-registered practices and privacy-by-design in every engagement.

From idea to deployed, supported product

Web applications

Platforms, portals, and dashboards on Laravel, React, and Blazor.

Desktop & industrial

Specialized C# / .NET software for engineering workflows.

Cloud & data layer

MySQL data models deployed and scaled on AWS.

Mobile applications

Cross-platform iOS & Android in React Native, one codebase.

Integrations

Facebook, payments, Shopify, NFC, and QR into one system.

Maintenance & support

Ongoing iteration, monitoring, and support after launch.

Turning data into products and decisions

AI AI-integrated applications

Conversational chatbots and AI-assisted learning inside client products.

ML Analytics & modeling

Pipelines, dashboards, and models that surface actionable insight.

DS Data science tooling

In-house analytics platforms built on Python and Django.

Decision platforms

Portfolio, structural, and operational tools that put analysis in users' hands.

A focused, proven toolkit

WEB

 **PHP / Laravel**

 **React**

 **Blazor**

 **Facebook**

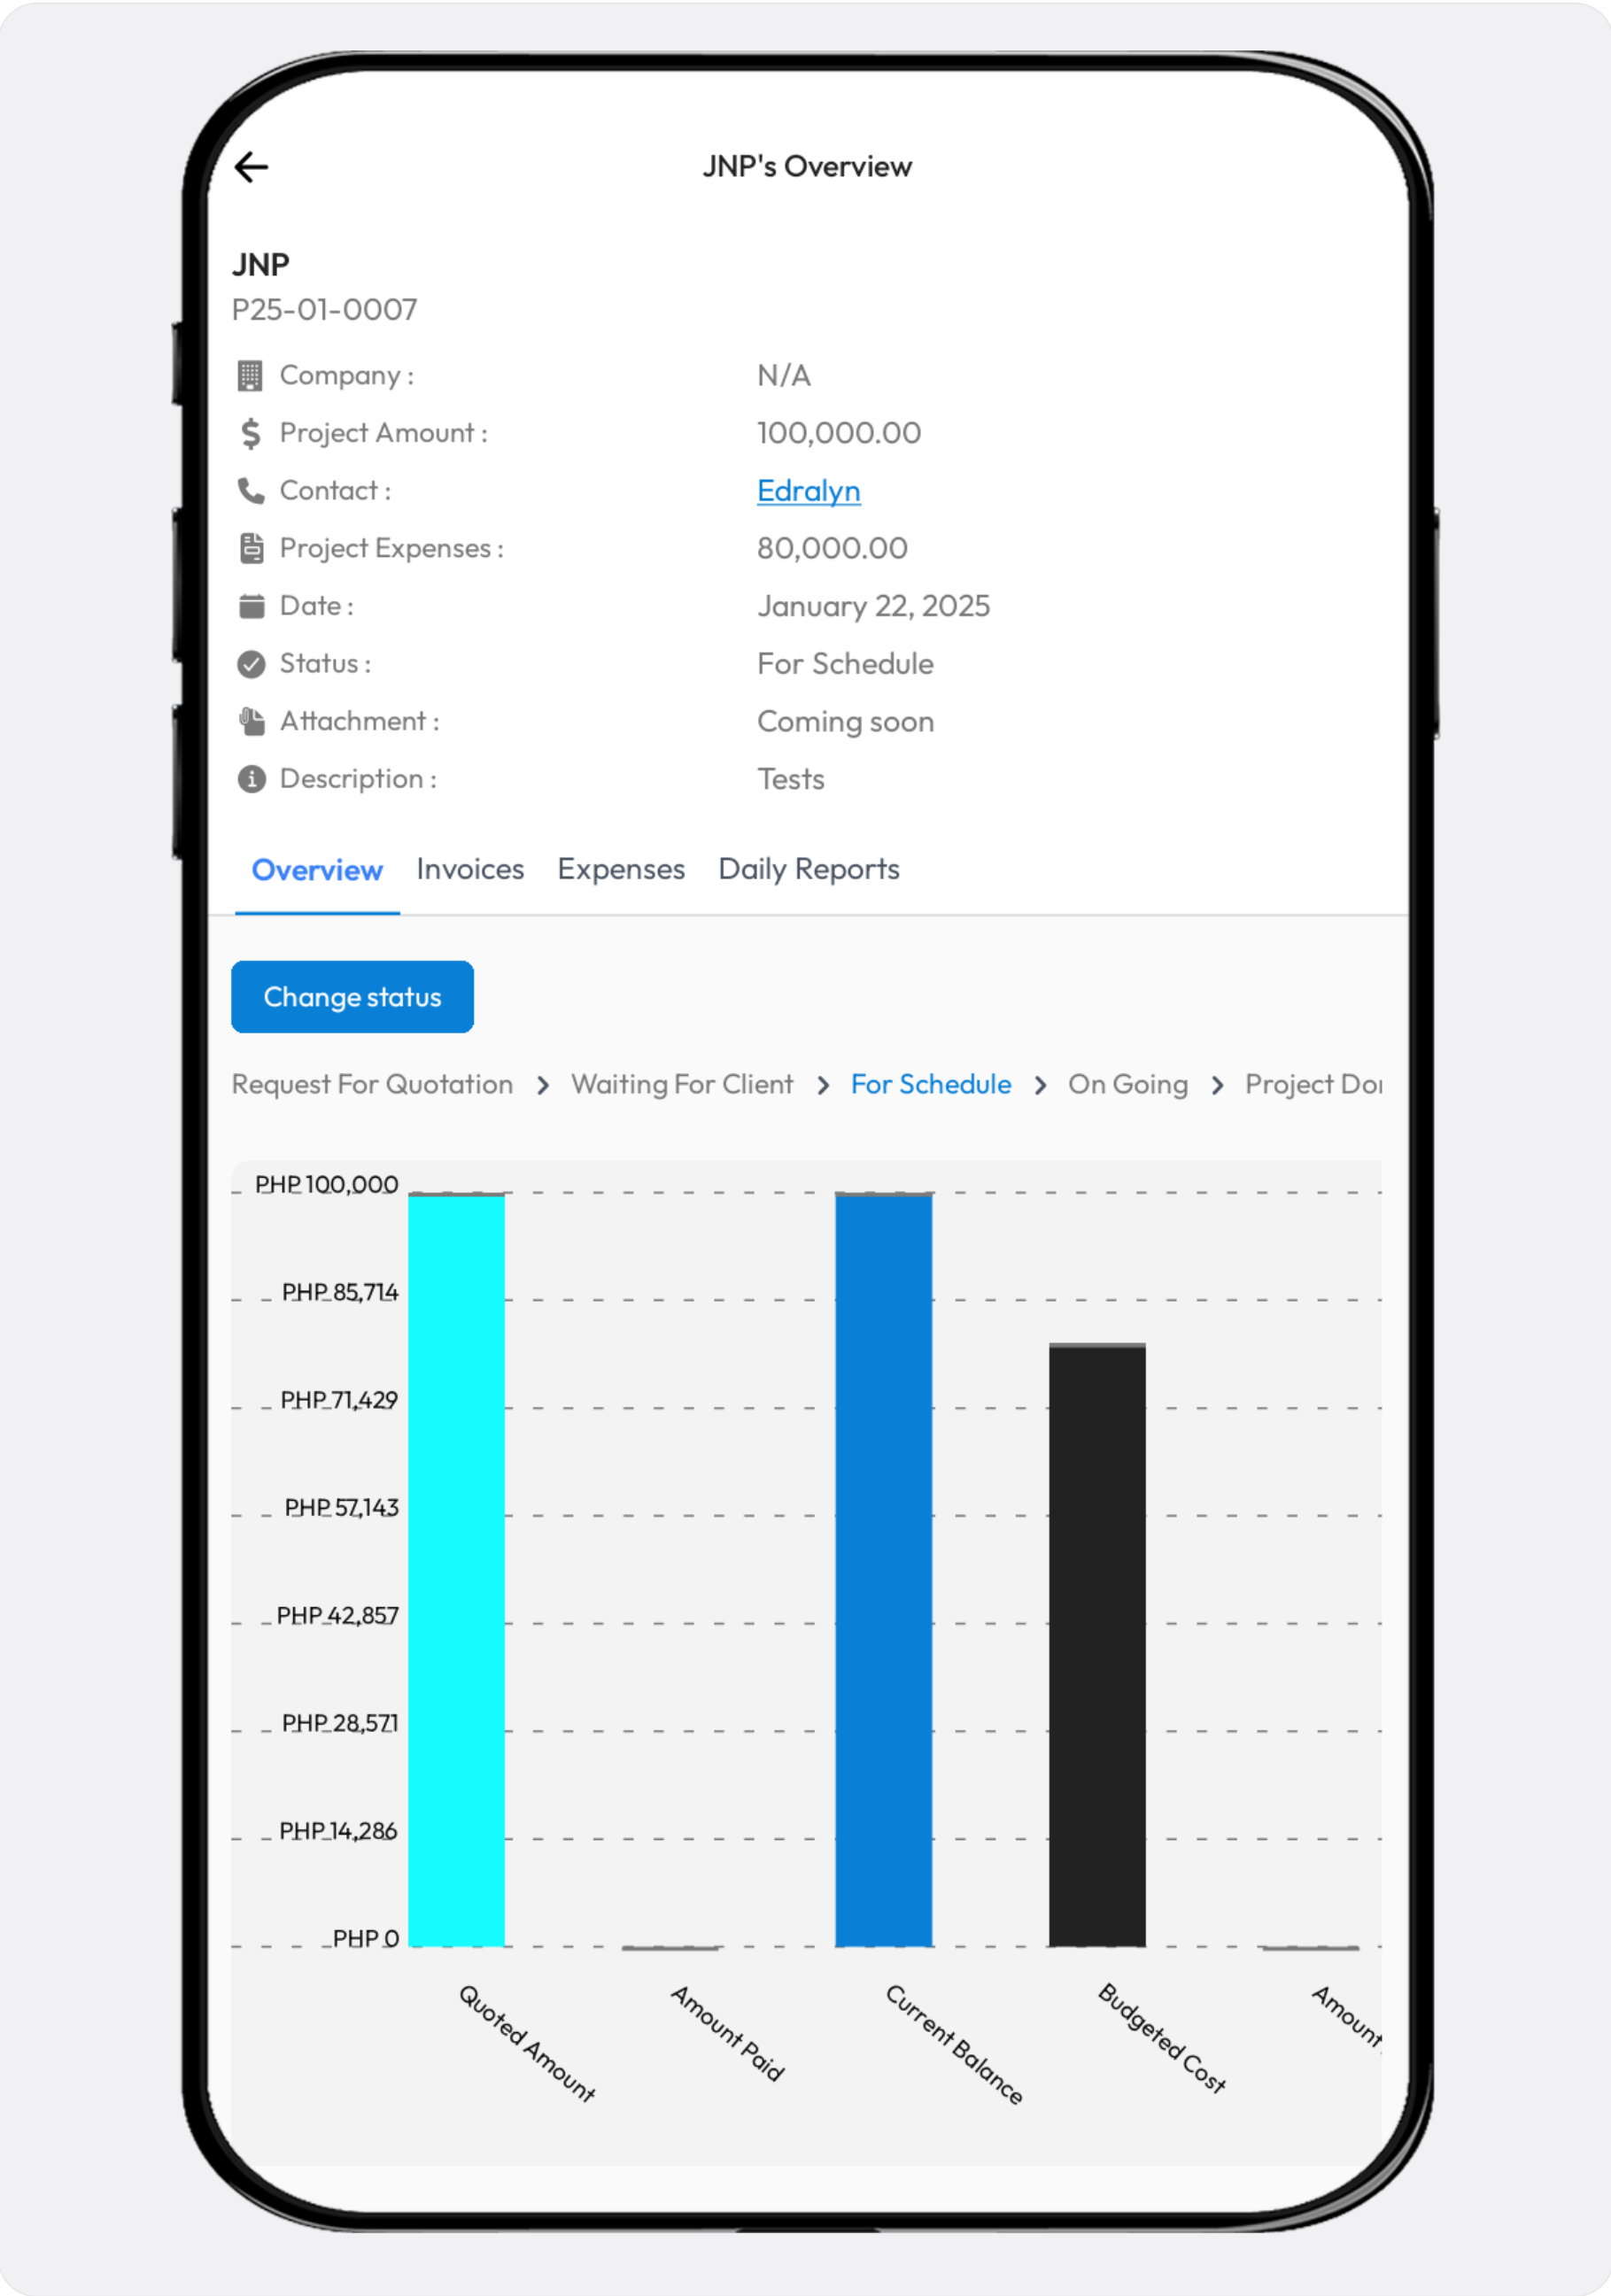

SELECTED WORK

A sample of what we build

Platforms across operations, AI, commerce, and engineering. Client identities are white-labeled for confidentiality.

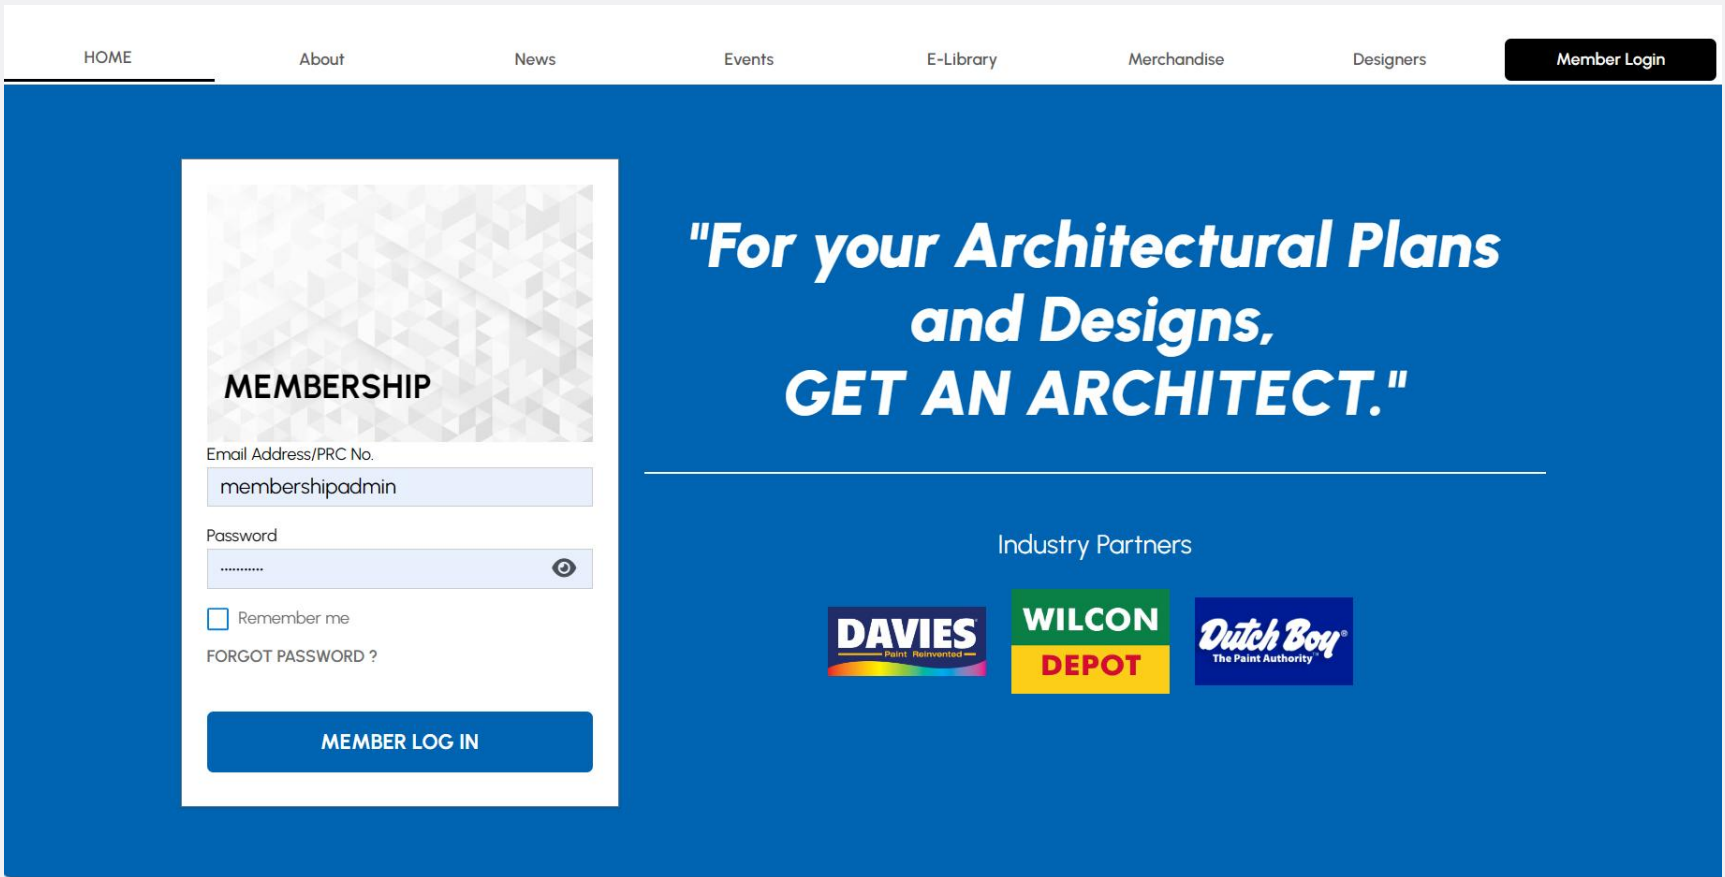

Project Management Platform

A web and mobile suite for planning projects, tracking tasks and schedules, managing invoices and expenses, and monitoring budgets against actuals — giving managers a single view of every project's health.

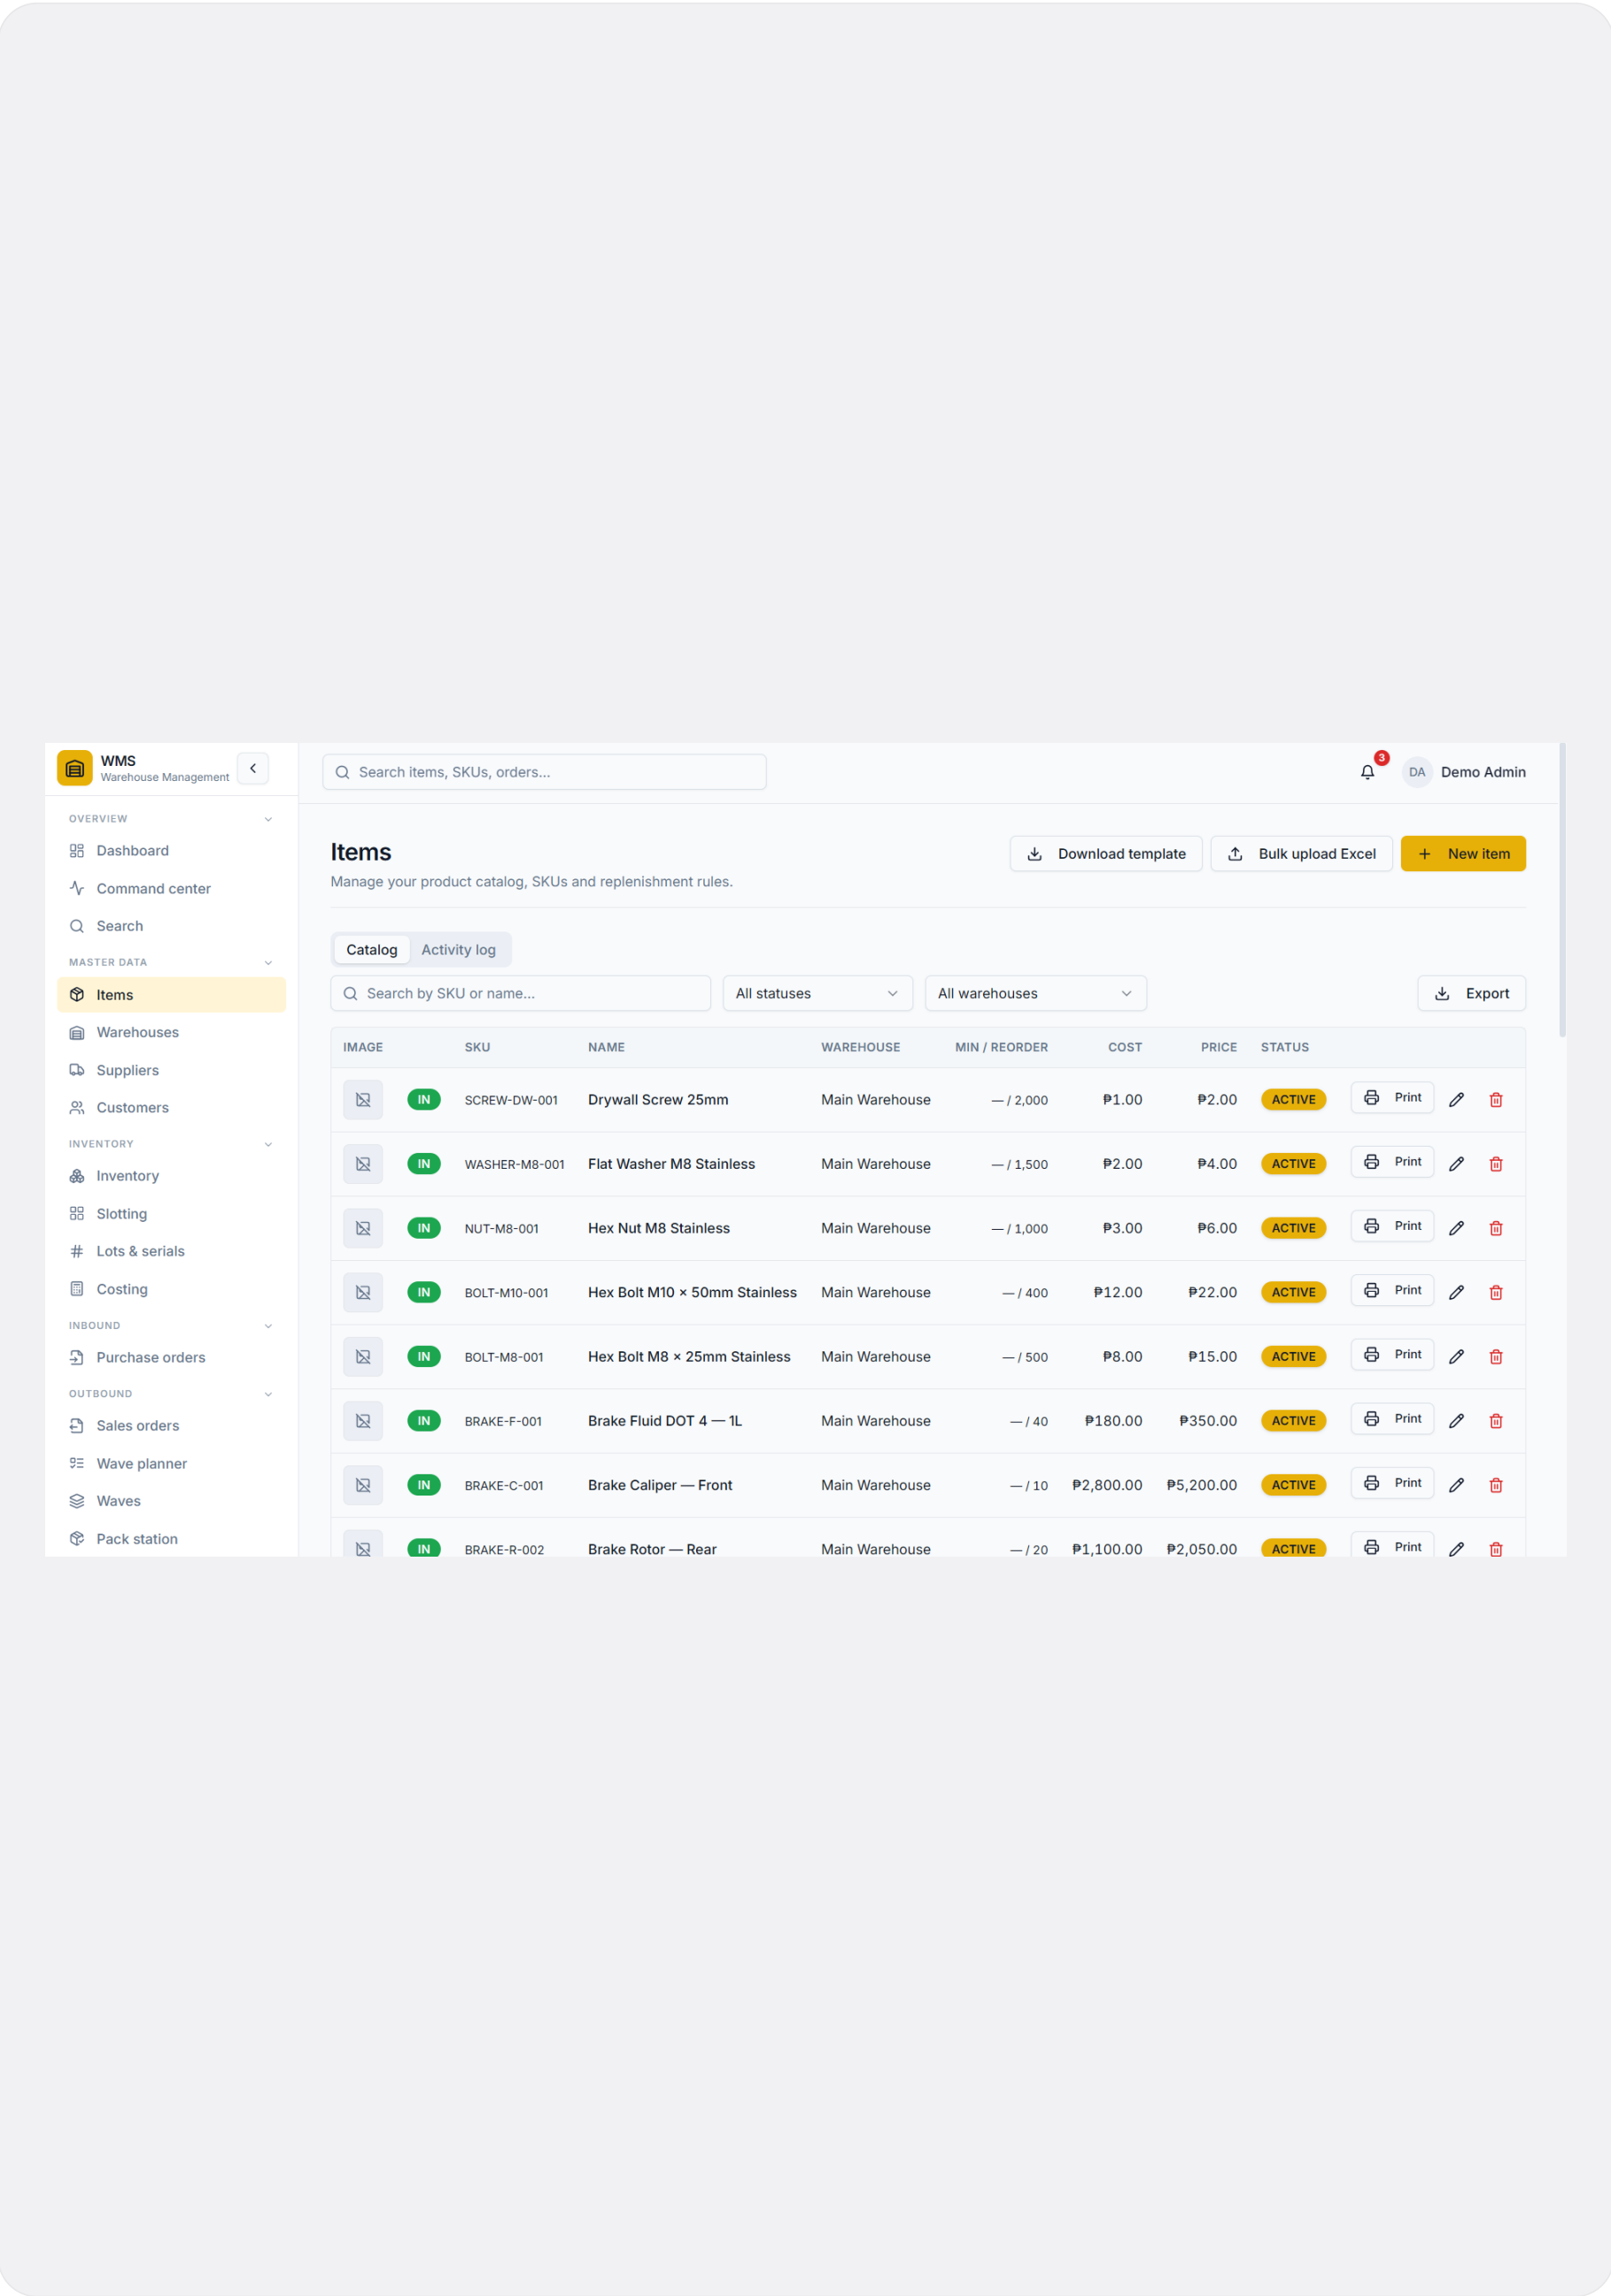

Membership Portal

A membership platform for a large professional organization — handling registration and records, chapter management, certificate issuance, and event sign-ups across web and mobile, serving tens of thousands of members.

Warehouse Management System

An inventory and fulfillment system with QR-sticker tagging, so every item and unit can be scanned in and out. Covers catalog, stock levels, slotting, and inbound/outbound flows across multiple warehouses.

AI Chatbot Platform

An AI chatbot that businesses train on their own knowledge base, then deploy across their website and Facebook Messenger — answering customers in natural, conversational language, including Taglish.

CLOUD
AWS

CHANNEL
Facebook

Digital Card System

A digital networking-card app paired with physical NFC cards. A single tap shares a fully branded profile — name, role, contact details and links — replacing paper business cards.

Education LMS with AI

A learning-management platform for higher education with AI built in — supporting class modules, outcome and curriculum mapping, Bloom's-level alignment checks, and automated quality-improvement reporting for faculty and program heads.

Pipe Manufacturing Software

Desktop engineering software that configures pipe-extrusion programs — profiles, materials, tooling and layer parameters — and computes production time and machine settings, paired with a Blazor web layer.

Blazor

Rapid Structural Assessment

A field tool for post-earthquake disaster response. Inspectors capture photos, location and damage data on mobile to rapidly triage building safety, feeding a dashboard that maps inspections, postings and damage by incident.

Submit Evaluation

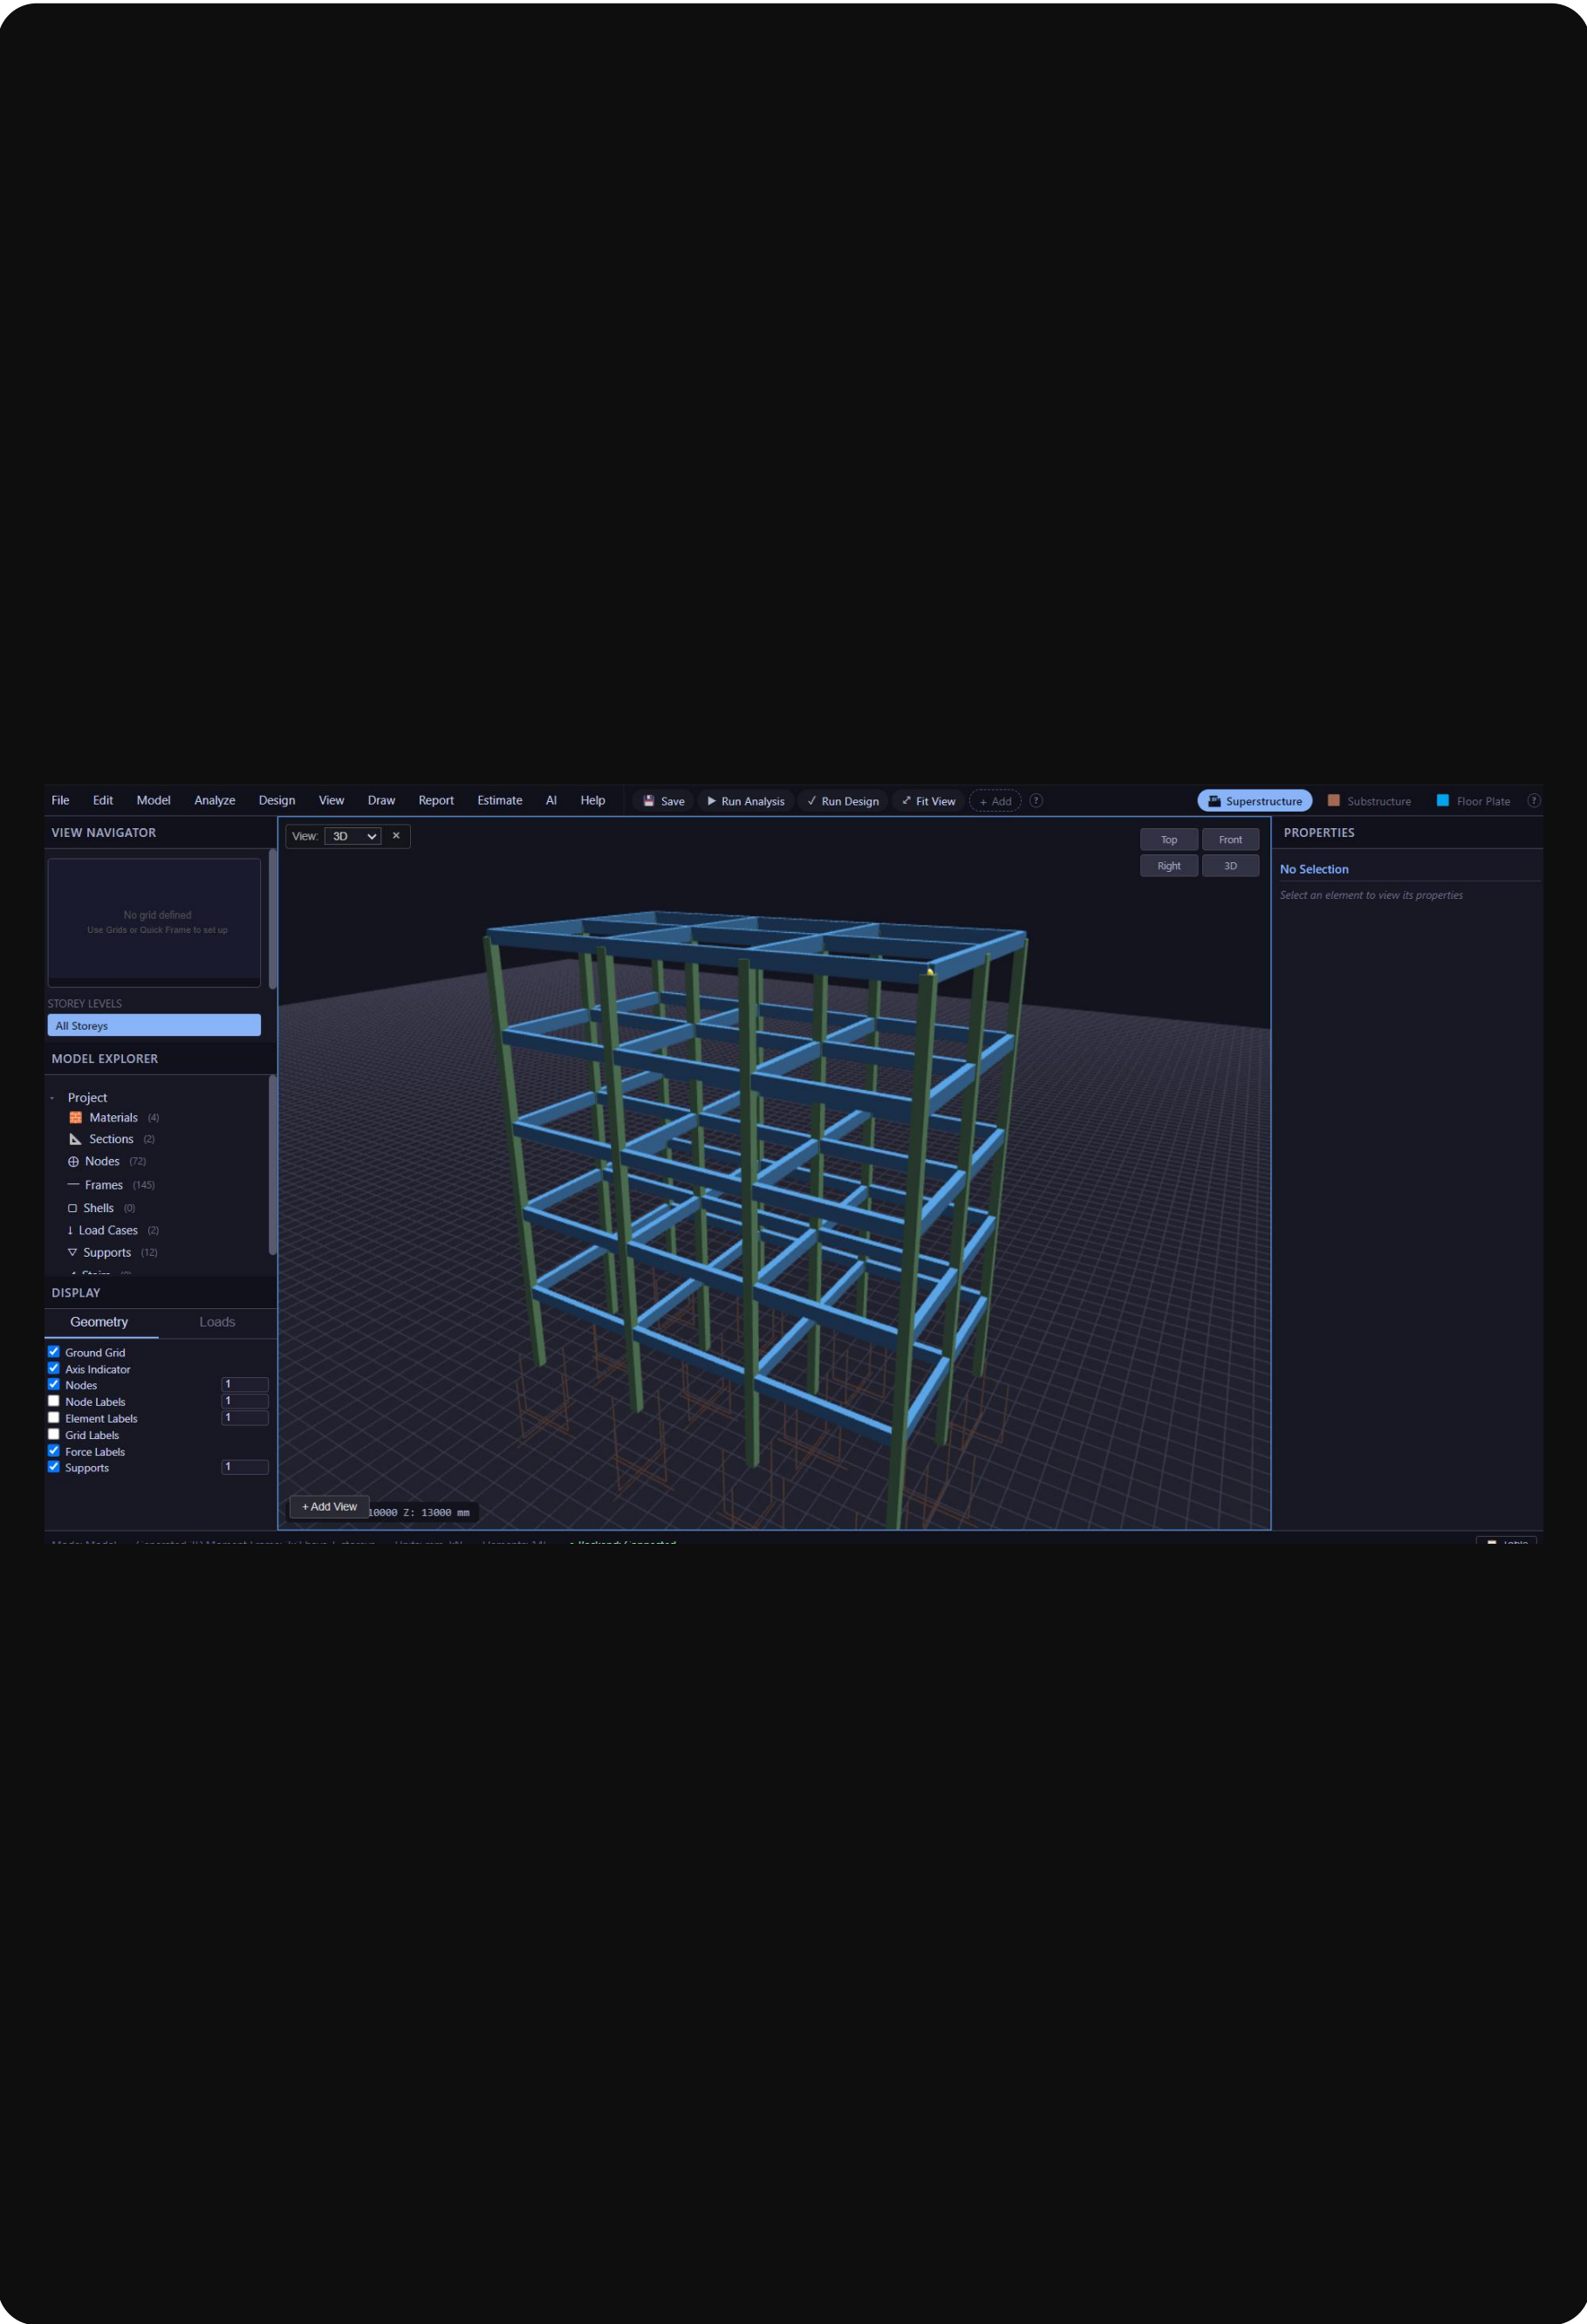

E-Commerce Platform

A Shopify storefront with custom integrations for a phone and phone-accessory retailer — organized by device brand, with product catalog, promotions, and a streamlined checkout.

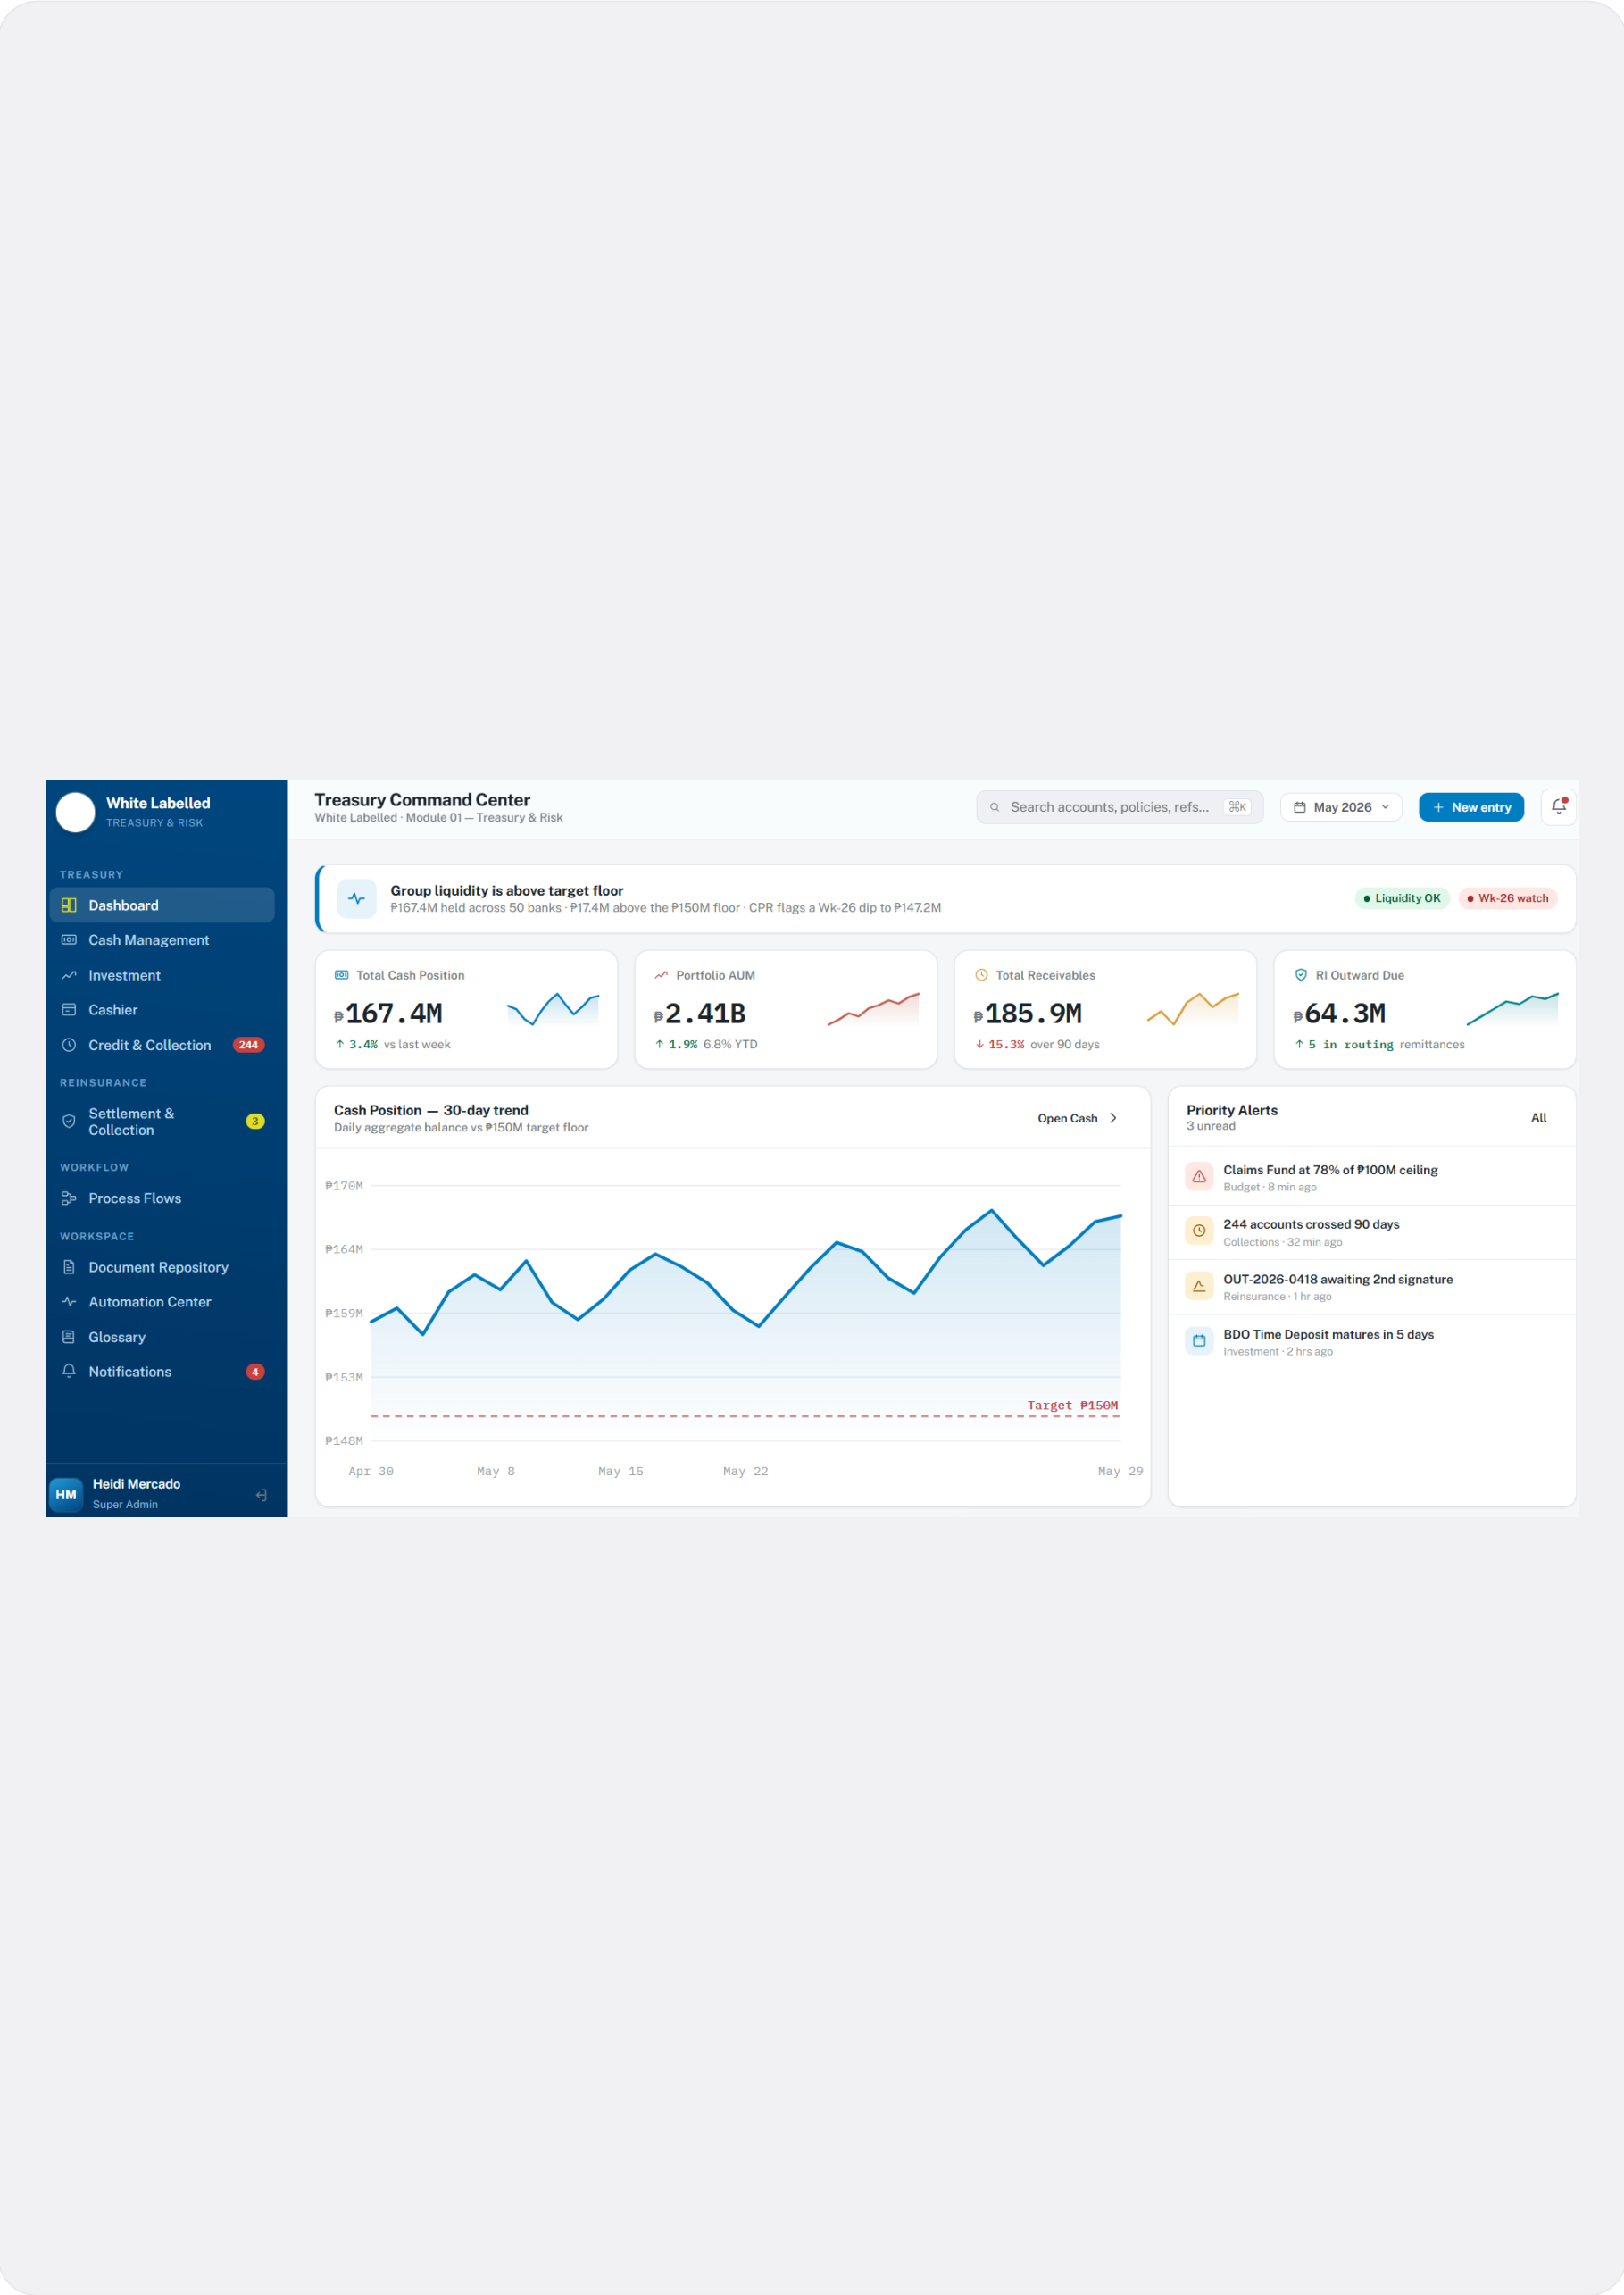

TABS — Structural Analysis & Design

Our in-house structural engineering software — a 3D modeling environment for framing, loads and supports with built-in analysis, design and reporting, currently in active development.

Insurance Portfolio Management

A white-labeled treasury and risk platform for an insurance client — bringing cash position, investments, receivables, credit & collection, and reinsurance settlement into one command center. Currently in active development.

A predictable path to launch

01

Discover

Scope, goals, and requirements.

02

Design

Architecture, data model, and UX.

03

Build

Iterative development and review.

04

Deploy

Launch and scale on AWS.

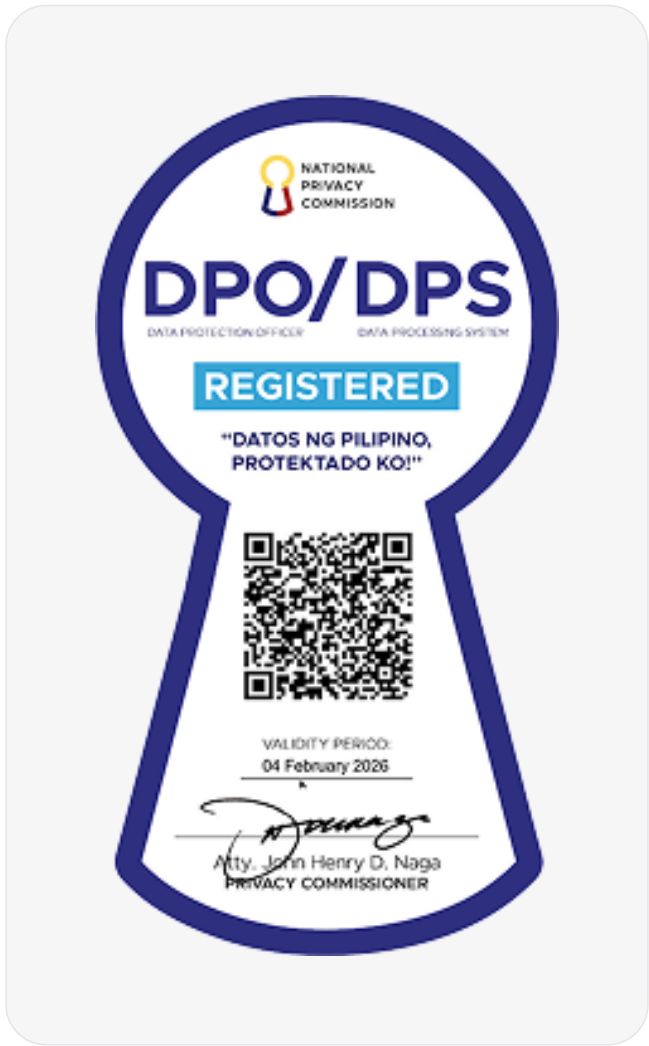

05

Support

Maintenance and iteration.

Privacy built in, not bolted on

KDT is registered with the National Privacy Commission as a Data Protection Officer (DPO) and Data Processing System (DPS). We design systems that handle personal and business data responsibly — from collection to storage to access.

NPC Registered

DPO / DPS compliant

Privacy by design

Built into every scope
